

## MRS2-Stretch vinyl seal

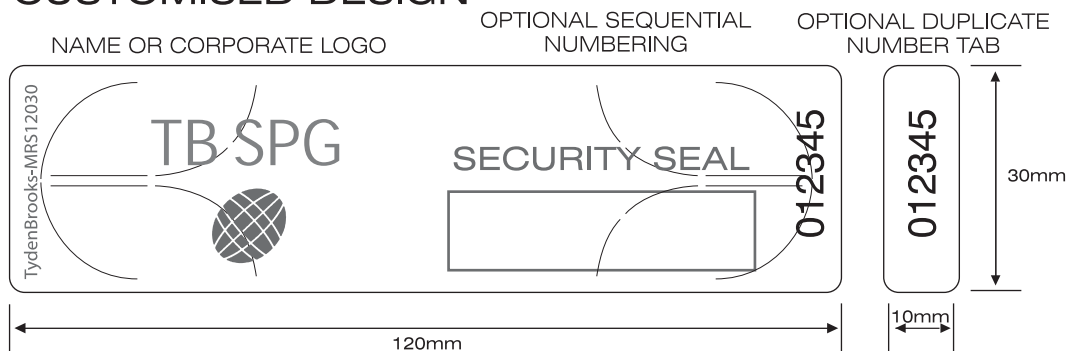

White polyethylene face material backed with high tack adhesive. The seal incorporates the security petal cuts, which makes removal, once applied almost impossible. The seal has an additional security feature that it will stretch and distort on tampering. The MRS is also designed not to leave unwanted adhesive residue on the surface of the sealed item.

Supplied in many differing sizes and shapes. It is effective on porous and non porous surfaces alike, such as, baggage, luggage, wooden crates, trailers canisters and drums and doors (internal and external).

- Supplied in reels with backing liner perforated between each seal.
- Double interlocking security cuts.
- Customised design text or logo with optional sequential numbering.
- Four standard sizes, but any shape or size can be supplied.
- One stock size.
